

Douglas J. Hendricks, MD

Douglas J. Hendricks, MD, is a board-certified physiatrist who treats patients in the context of the patient as a whole person, rather than simply treating a particular problem. He specializes in the evaluation and rehabilitative treatment of the back, neck and extremity pain. As a physiatrist, Dr. Hendricks works with his patients to accurately diagnose and effectively treat their pain, with special consideration for more conservative treatment measures such as physical therapy, medication, and steroid injections to soothe irritated nerves.

Dr. Hendricks graduated summa cum laude from the University of Wisconsin-Platteville, majoring in Biology, before attending the University of Wisconsin Medical School in Madison, Wisconsin. He completed his internship in Internal Medicine at the University of Wisconsin Hospitals and Clinics in Madison, Wisconsin. He went on to complete his residency at the University of Wisconsin Hospitals and Clinics, specializing in Physical Medicine and Rehabilitation.

In addition to his training in the diagnosis and nonsurgical treatment of conditions of the muscles, bones, disks and nerves, Dr. Hendricks has extensive training and expertise in electrodiagnostic testing. He is board certified by the American Board of Physical Medicine and Rehabilitation.

Dr. Hendricks' over 17 years of experience and commitment to continually improving allows him to help hundreds of patients each year improve their quality of life. He takes time to carefully listen to each patient's concerns and help to pinpoint the cause of their pain, before thoroughly discussing all options for treatment and potential outcomes.

Dr. Hendricks now practices at the NeuroSpine Center of Wisconsin, a multispecialty private group practice providing comprehensive world-class integrated care to individuals suffering from spine injuries, brain injuries, tumors, and acute or chronic pain. In addition to physiatrists, the clinic houses surgeons and physical therapists. The providers at the NeuroSpine Center of Wisconsin work closely as a team to give each patient exceptional individualized care with the least risk and inconvenience at every step along the road to recovery.
