

Randall J. Schultz, MD

Randall J. Schultz, MD is a board-certified physiatrist who strives to get to know his patients as unique individuals, in order to develop an effective treatment plan to minimize how pain interferes with their lives. As a physiatrist, he works with his patients to accurately diagnose and effectively treat their pain, with special consideration for more conservative treatment measures such as physical therapy, medication, and steroid injections to soothe irritated nerves.

Dr. Schultz graduated from Wheaton College, with a degree in Chemistry and Economics, before attending medical school at the Loyola University Stritch School of Medicine. He completed his internship at St. Joseph Hospital, then went on to complete his residency in Physical Medicine and Rehabilitation at the Columbia-Presbyterian Medical Center, where he developed his specific skills in treatment of spine and extremity pain. Dr. Schultz is trained in a variety of spinal injection procedures to alleviate pain arising from the spine.

Dr. Schultz has been practicing for over 20 years, which has granted him valuable expertise. He carefully considers all of his patients' concerns, ensures that all of his patients' questions are answered, and works with his patients to find treatments that promote the most active and full lifestyle possible.

Dr. Schultz now practices at the NeuroSpine Center of Wisconsin, a multispecialty private group practice providing comprehensive world-class integrated care to individuals suffering from spine injuries, brain injuries, tumors, and acute or chronic pain. In addition to physiatrists, the clinic houses surgeons and physical therapists. The providers at the NeuroSpine Center of Wisconsin work closely as a team to give each patient exceptional individualized care with the least risk and inconvenience at every step along the road to recovery.
